

Web-based FRACAS and Much, Much More...

ReliaSoft's Quality Tracking and Management System (QTMS) is a Web-based, closed-loop, incident (failure) reporting, analysis and corrective action system (FRACA/FRACAS) designed for the acquisition, management and analysis of product quality and reliability data from multiple sources, and the management of problem resolution activities.

- A complete array of resources for customer support, incident (failure) reporting and problem management and resolution, with advanced workflow/actions management tools for progress tracking. This includes the ability to generate automated verifications via e-mail.
- Complete system configuration management and part tracking from original Bill of Materials (BOM), through part repairs and replacements, to detailed failure analysis and remanufacturing.
- Extensive and flexible query, reporting and plotting capabilities with the ability to export results to Microsoft Excel and ReliaSoft's reliability analysis tools for complete and in-depth reliability analyses.
- And much more...
